

WEB & MOBILE APPLICATIONS DEVELOPER

Hi, my name is **Clark Inocalla** I'm a recent Software Engineer graduate at University of Regina. I specialize in UI/UX design where I can make your vision come to **life**.

PROJECTS

Humane Transport

A Flutter and Firebase mobile application to record Canadian animal transport and transfer of care documentation, meeting the requirements and regulations set out by the Health of Animals Act and the Canadian Food Inspection Agency (CFIA).

Let's Get Physical

A mobile application where people in a community can share their physical activity stories to other people. This application hopes to inspire people by seeing other people achieve their physical activity in a day. The application itself will be a tool that will help community to promote good health and healthy lifestyle.

ABOUT ME

Education

I started my Software Engineering journey in winter 2015 at University of Regina. It took me almost six years to finish my degree (longer than usual), not because I'm slacking/failing my classes, but I had to work full-time while maintaining a status of "full-time" student. So, at most I was taking three classes per semester. After all that struggle... in 2021, I finally did it and completed my degree!

Internship

In 2019, I was fortunate enough to work at eHealth Saskatchewan for my internship. My position there was IT Service Desk Analyst which is mainly to provide trouble-shooting support to our users. Besides being an IT, I was also assigned to develop UI/UX to their existing application.

What I'm Doing

I was planning to go for vacation right after I graduate, but due to pandemic I cannot do that anymore. So, instead of doing nothing at home, I decided to focus and enhance my development skills by creating new projects and review data structures and algorithms.
